SUMMARY

Cloud Infrastructure Engineer with 3+ years building and running **Kubernetes-based** platforms for high-throughput **GPU/ML inference**, multi-cluster federation, and production automation. Proven record of cutting cloud costs, improving system reliability through **IaC**, **CI/CD**, and **SRE** practices across fintech and AI-infra environments.

SKILLS

Kubernetes & Multi-Cloud	Kubernetes, Kubeadm, AWS, Azure, GCP, Docker, Helm, Terraform, Karmada
GitOps & Scheduling	ArgoCD (GitOps), KEDA, KAI-Scheduler, MIG/Fractional GPU Sharing
GPU & AI Infra	CUDA, NVIDIA GDS, NVIDIA Dynamo, vLLM, High-throughput ML Inference
Networking & Security	ZTNA, WireGuard, VPC Peering, RBAC, WAF, ZeroSSL/TLS
Observability	Prometheus, Grafana Cloud, Loki, Mimir, ClickHouse, Kafka, PagerDuty
Backend & Integration	Java/Spring Boot, Python, Camel Karavan, MySQL, REST APIs, OAuth2/JWT

EXPERIENCE

Sr. Cloud Infrastructure Engineer Apr 2026 - Present
Simplismart, Bengaluru, IN (**Kubernetes, GPU/MLOps, Inferencing**)

- Built a self-hosted **Kubernetes** platform end-to-end with **Kubeadm** for a multi-tenant GPU inference fleet.
- Rolled out **KAI-Scheduler** with **MIG**-based fractional GPU sharing, priority-based node affinity, and **NVIDIA GDS** integration, boosting GPU utilization by enabling **4+ workloads** to share a single H100.
- Led zero down time migration to **Grafana Cloud** from Grafana OSS stack (Loki/Mimir) with metrics-cardinality reduction upto **80%** and org-scoped alert categorization for customer-facing SLAs.
- Implemented **multi-cluster federation** with **Karmada** centralizing control across independent clusters.
- Drove **warmpool** stabilization and faster-scaleup R&D across all 3 major clouds, cutting GPU pod cold-start latency by **90%** for high-concurrency inference.

Cloud Infrastructure Engineer Oct 2025 - Mar 2026
Simplismart, Bengaluru, IN (**AWS, Terraform, KEDA**)

- Hardened production clusters end-to-end with **RBAC**, **WAF**, **ZeroSSL/TLS** automation, and secure multi-cloud connectivity (**VPC peering** over **WireGuard**), closing key security gaps ahead of customer onboarding.
- Eliminated recurring storage outages by resolving **WekaFS** and Loki/Mimir PVC issues, and enabled **RWX** capable volumes across all 3 major clouds for **shared model storage**.
- Cut GPU idle-compute costs via **KEDA** driven autoscaling and Cluster Autoscaler node groups.

Software Engineer II (Infrastructure) Aug 2023 - Sep 2025
Baton Systems, Chennai, IN (**Java/Spring Boot, Kubernetes, MySQL, Helm**)

- Implemented **HPA** and configured **node affinity** and **pod tolerations** in **Kubernetes** to handle traffic spikes, optimizing for peak load with efficient resource utilization across nodes.
- Developed a **Kubernetes** native low-code integration tool based on **Camel Karavan** and **AtlasMap** supporting **ETL**, enabling quick workflow development even by non-technical users.
- Earned **3 Spot Awards** (Q1'24, Q3'24, Q1'25) for automation and infrastructure impact.

EDUCATION

Bachelor of Technology (B.Tech.) in Computer Science & Engineering **CGPA: 8.63** — 2019 - 2023
Christ College of Engineering *Irinjalakuda, Kerala, IN*

ACHIEVEMENTS

- **5x Hackathon Winner** (1 International, 4 National) – Kerala Police Hac'KP'21 ([dark-web monitoring](#))
- Speaker at **DevDay Chennai 2025** (eBPF), **Kochi FOSS 2025** (Selenium automation).
